

PRISM

Enterprise Decision Intelligence Platform

Prism transforms enterprise experience into reusable decision intelligence.

Explainable

Governed

Reusable

Chat is temporary. Decisions are not.

Enterprise AI without governance is just expensive autocomplete.

Traditional AI Chat

Response disappears in chat

No evidence trail

No approval workflow

Nothing is learned

VS

Prism Decision Object

Structured Decision Card

Evidence from 4 agents

Human approval gate

Outcome updates memory

How Prism thinks.

One decision. Eight stages.

↔ Every outcome feeds back into organizational memory

Auditable

Full evidence trail from input to recommendation

No raw transcripts

Only structured facts leave the extraction stage

Evidence first

Recommendation generated after all agents complete

Not a chatbot. Not a black box.

Dimension	Traditional AI	Prism
Output	Raw text response	Structured Decision Card
Explainability	Opaque generation	Evidence from 4 agents
Governance	None by default	Human approval gate
Learning	No memory of outcomes	Outcome-based org memory
Use cases	Single-purpose demos	Sales, HR, Finance, Ops, Health

Memory that actually matters.

Memory ≠ chat history

Prism stores business decisions + outcomes

Every outcome is evidence

Success, failure, partial — all become patterns

Future recs improve

The platform gets smarter with every case

ENTERPRISE VALUE

One engine. Every team.

Healthcare

Patient flow & capacity

Sales

Unblock stalled deals

Prism Core Engine

Operations

Supply & delivery

HR

Retention decisions

Customer Success

Renewal risk

Finance

Budget decisions

CONCLUSION

✦ Trustworthy AI

Traceable decisions, not black-box outputs

⬡ Governed Decisions

Human approval built into every workflow

↻ Reusable Experience

Org memory that compounds over time

◆ Platform Potential

One engine across all enterprise personas

Prism transforms enterprise experience into reusable decision intelligence.
